Hiring Manager DV8 Energy Inc.
Calgary, AB, Canada

RE: Application for Junior Embedded & IoT Edge Developer

Dear Hiring Team at DV8 Energy,

I am writing to express my strong interest in the Junior Embedded & IoT Edge Developer position. As an Embedded Systems & IoT Engineer with over four years of hands-on experience designing end-to-end industrial edge solutions, I have closely followed DV8 Energy's work in leveraging IIoT technologies to redefine oil and gas production.

To address my current location directly: I am based in Bangladesh but am actively structuring my transition to Canada via skilled migration pathways. I am highly motivated to enter the Canadian energy sector, which is exactly why I am enthusiastically targeting this specific on-site role in Calgary. I am fully prepared to take on the logistical and financial responsibilities of relocation to join a forward-thinking team like DV8 Energy.

While applying for an early-career role, I bring a mid-level execution capability that will provide immediate ROI for your engineering team. Operating a dedicated hardware R&D lab, I have spent the last four years building production-ready firmware and hardware using the exact stack DV8 requires: **ESP32 architectures, C/C++, Python, and comprehensive sensor integration.** A few highlights from my background that directly align with your edge computing and energy sector needs:

- **Industrial Reliability:** At GRIT Technologies Limited, I engineered and deployed predictive maintenance sensor nodes (vibration and temperature) using RS-485 and Modbus for high-interference environments at British American Tobacco. I understand that industrial edge hardware cannot fail in the field.
- **Firmware & Edge Computing:** I regularly develop non-blocking C++ firmware using FreeRTOS for ESP32 devices, optimizing deep-sleep cycles and remote telemetry for complex, multi-sensor ecosystems.
- **Component-Level Design:** I am highly comfortable reading datasheets, designing custom PCBs with galvanic isolation, and utilizing logic analyzers to debug hardware-software interfaces down to the bare metal.

I am eager to bring my rigorous testing standards, deep understanding of IoT data pipelines, and self-learning drive to DV8 Energy. I would welcome the opportunity to discuss how my hands-on background can support your ongoing projects and accelerate the delivery of your connected edge solutions.

Thank you for your time and consideration.

Sincerely, **Sakiul Mowla Ramim**
